

lumage W creative

make your own illuminated cards

writing / drawing / coloring / painting / piercing
inkjet printing / offset printing / stamping

suitable for standard
tea-lights

made of unique,
self-extinguishing materials

Congratulations on the purchase of 'Lumage W Creative' illuminated cards!

Content of set

Your Lumage W Creative set consists of the following items:

- 2 Lumage W cases
- 2 sheets of self-extinguishing Lumage paper (A4)
- A standard lay-out for the card lay-out of the A4-sheet (see reverse side)
- 2 cardboard cut-out- and pricking cards
- A test card: test the self-extinguishing feature of the Lumage material

Who is the Lumage W Creative intended for?

The Lumage W Creative has been made for people who want to make their own illustrations on the Lumage illuminated cards.

The Lumage W Creative is:

- personal and unique: everyone can realise his or her own card design,
- current, flexible and fast: slide cards can be made for the Lumage W at any time and in any place,
- favourably priced: the blank item price is low and there are no scanning- or start-up costs.

The possibilities of the Lumage W Creative

You can make your own illustrations on the Lumage paper by means of inkjet- and matrix printing. Writing, drawing, coloring, painting, stamping and piercing are also possible. Four slide cards can be cut out of 1 A4-sheet of Lumage paper. Pierced or cut-out patterns can be made in the cardboard cards.

Printing method

- Copy the standard lay-out (see reverse side) in a computer program (e.g. a DTP or drawing program). Provide the 4 rectangles with your illustrations or designs.
- First, make a test print of your page design on normal paper.
- Then, print your page design onto Lumage paper.
- Cut the sheets into slide cards (see below)

Tip: At your request, Lumage will e-mail you a CorelDraw-file of the standard lay-out.

Method Drawing, Painting, Embossing etc.

- Use the standard lay-out (see reverse side) as background and copy it onto blank A4 sheets of Lumage paper. This can be done by tracing the lines or end points of lines with e.g. a pencil.
- Apply your illustrations inside the illustration rectangles.
- It may be useful to cut the A4 sheet into cards before applying illustrations, see the next paragraph.

Method cutting into slide cards

- Cut the slide cards inside the (printed or copied) card lines of the standard lay-out. The enclosed cardboard card can also be used to trace the card outline onto the paper.
- If you use an office cutting machine, you will obtain excellent results.

Assembly of slide card in Lumage W

- Slide the completed slide card into the slide lips of a Lumage case. The case does not necessarily have to be set up for this purpose. If the card does not slide in easily, the width of the card can be shortened.
